¹ **Book review papers**, which are specialized critiques providing content analysis and analytical reviews of scholarly books, are published in several esteemed journals within the field of landscape architecture. Unlike standard peer-reviewed articles, these submissions are not subject to the conventional double-blind peer review process. Instead, they are assessed directly by the book review editor or, in some cases, by a single confidential reviewer. The editor or reviewer evaluates the submitted manuscript on the critique of a recently published book and provides feedback for revisions where necessary.

It is worth noting that many book review submissions are ultimately rejected during this process. To maintain transparency, I have presented these book reviews under a separate section in my profile.
